Manuscript Title: Open-Loop Linear-Programming Forest Plans Are Not Credible: A Reproducible Replication of Daugherty (1991)

Author: Gregory Paradis

Department of Forest Resources Management, University of British Columbia, Vancouver, Canada

Corresponding Author: Gregory Paradis

Email: gregory.paradis@ubc.ca

ORCID: 0000-0001-9618-8797

Keywords: dynamic inconsistency; forest planning; linear programming; even flow; harvest scheduling; reproducibility; open-loop control; ws3

Statements and Declarations:

Funding: Development of this work was supported by the Forest Resources Environmental Services Hub (FRESH) at the University of British Columbia.

Competing Interests: The author declares no competing interests.

Author Contributions: G. Paradis designed the study, performed the analysis, and prepared the manuscript.

Employment: G. Paradis is employed as an Assistant Professor at the University of British Columbia.

LLM Use: LLM-assisted tools contributed to code development and editing; the author approved all content.

Data Availability: All software, extracted case-study data, experiment configurations, simulation records, and the validation records supporting this paper are openly available in the `fresh-daugherty` repository at `https://github.com/UBC-FRESH/fresh-daugherty`; the Umpqua planning documents are public-domain US Forest Service works accessible via HathiTrust (records 002547999 and 002439528).

Consent/Ethics: Not applicable; the study uses publicly available data.
